AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the

application.

LISTING OF CLAIMS

1. (currently amended) A method for interfacing with a home automation system using a

router comprising:

receiving a control signal from an instant messenger application, the control

signal received by the router via a communications network, wherein the transmission of

the control signal is initiated by the instant messenger application;

transmitting the control signal to at least one appliance to control the appliance in

accordance with the control signal; and

transmitting a reply to the instant messenger application regarding a status of the

appliance.

2. (original) The method of claim 1 further comprising:

transmitting the control signal to the appliance in accordance with a standardized

home automation interface.

3. (original) The method of claim 1 further comprising:

interfacing with the appliance via a home automation system interface unit

configured to control a plurality of appliances, the interfacing conducted in accordance

with a standardized home automation interface.

- 4. (original) The method of claim 3 wherein the home automation system interface unit is a transceiver configured to control the plurality of appliances.
- 5. (original) The method of claim I further comprising:

logging onto an instant messenger server; and functioning as an instant messenger client to receive the control signal.

6. (original) The method of claim I further comprising:

receiving an event signal from the appliance; and

transmitting a message to the instant messenger application regarding the event signal from the appliance.

7. (original) The method of claim I further comprising:

maintaining a firewall in the router; and

transmitting a message to the instant messenger application through the firewall

8. (currently amended) A router for interfacing with a home automation system via a communications network, comprising:

a network interface for communicating with a communications network; a home automation system interface for communicating with a home automation system; and

a computer system for executing computer readable code, the computer system having a processor coupled to a memory, the memory having computer readable code which when executed by the processor causes the router to implement a method

wall.

comprising:

receiving control signals from an instant messenger application, the control signal

received by the router via the network interface, wherein the transmission of the control

signal is initiated by the instant messenger application;

transmitting the control signal to at least one appliance to control the appliance in

accordance with the control signal, the control signal transmitted to the appliance via the

home automation system interface; and

transmitting a reply to the instant messenger application regarding a status of the

appliance.

9. (original) The router of claim 8 wherein the method further comprises:

transmitting the control signal to the appliance in accordance with a standardized

home automation interface.

10. (original) The router of claim 8 wherein the method further comprises:

interfacing with the appliance via a home automation system interface unit

configured to control a plurality of appliances, the interfacing conducted in accordance

with a standardized home automation interface.

11. (original) The router of claim 10 wherein the home automation system interface unit

is a transceiver configured to control the plurality of appliances.

12. (original) The router of claim 8 wherein the method further comprises:

logging onto an instant messenger server; and

functioning as an instant messenger client to receive the control signal.

13. (original) The router of claim 8 wherein the method further comprises:

receiving an event signal from the appliance; and

transmitting a message to the instant messenger application regarding the event

signal from the appliance.

14. (original) The router of claim 8 wherein the method further comprises:

maintaining a firewall in the router; and

transmitting a message to the instant messenger application through the firewall

wall.

15. (original) A router for interfacing with a home automation system comprising:

means for receiving a control signal from an instant messenger application, the

control signal received by the router via a communications network, wherein the

transmission of the control signal is initiated by the instant messenger application;

means for transmitting the control signal to at least one appliance to control the

appliance in accordance with the control signal; and

means for transmitting a reply to the instant messenger application regarding a

status of the appliance.

16. (original) The router of claim 15 wherein the control signal transmitting means is

configured to transmit the control signal to the appliance in accordance with a

CSCO-141408

Examiner: Murphy, R.

Serial No.: 10/040,699

Group Art Unit: 2616

standardized home automation interface.

17. (original) The router of claim 15 further comprising:

means for interfacing with the appliance via a home automation system interface unit configured to control a plurality of appliances, the interfacing means compatible with a standardized home automation interface.

18. (original) The router of claim 17 wherein the home automation system interface unit is a transceiver configured to control the plurality of appliances.

19. (original) The router of claim 15 of further comprising:

means for logging onto an instant messenger server; and means for functioning as an instant messenger client to receive the control signal.

20. (original) The router of claim 15 further comprising:

means for receiving an event signal from the appliance; and means for transmitting a message to the instant messenger application regarding the event signal from the appliance.

21. (original) The router of claim 15 further comprising:

means for maintaining a firewall in the router; and means for transmitting a message to the instant messenger application through the

CSCO-141408

Serial No.: 10/040,699 Examiner: Murphy, R. Group Art Unit: 2616 6

firewall wall.

22. (original) The router of claim 15 wherein the communications network is the Internet.

23. (currently amended) A computer readable media having computer readable code

which when executed by a processor of a router causes the router to implement a method

for interfacing with a home automation system via a communications network,

comprising:

receiving a control signal from an instant messenger application, the control

signal received by the router via a communications network, wherein the transmission of

the control signal is initiated by the instant messenger application;

transmitting the control signal to at least one appliance to control the appliance in

accordance with the control signal; and

transmitting a reply to the instant messenger application regarding a status of the

appliance.

24. (original) The computer readable media of claim 23 further comprising:

transmitting the control signal to the appliance in accordance with a standardized

home automation interface.

25. (original) The computer readable media of claim 23 further comprising:

interfacing with the appliance via a home automation system interface unit

configured to control a plurality of appliances, the interfacing conducted in accordance

CSCO-141408

Serial No.: 10/040,699 Examiner: Murphy, R. 7 Group Art Unit: 2616 with a standardized home automation interface.

26. (previously presented) The computer readable media of claim 25 wherein the home

automation system interface unit is a transceiver configured to control the plurality of

appliances.

27. (original) The computer readable media of claim 23 further comprising:

logging onto an instant messenger server; and

functioning as an instant messenger client to receive the control signal.

28. (original) The computer readable media of claim 23 further comprising:

receiving an event signal from the appliance; and transmitting a message to the

instant messenger application regarding the event signal from the appliance.

29. (original) The computer readable media of claim 23 further comprising:

maintaining a firewall in the router; and

transmitting a message to the instant messenger application through the firewall

wall.
